2018 Fall Meeting
November 8, 2018 ~ 4:00 – 8:00

University of Michigan North Campus Research Complex: 2800 Plymouth Rd, Ann Arbor MI 48109

We invite all GLC members and friends to join us for the fall meeting to revisit the clinical and physics aspects of MRI in brachytherapy and external beam radiotherapy.

RSVP/register for the meeting at chapter.aapm.org/GLC/

$10 - GLC Members and Associate Members
Free - GLC Student and Resident Members

This meeting has applied to CAMPEP for approval of 2.25 MPCEC hours

Thanks to our sponsors for helping us continue to provide GLC events!
2018 Fall Meeting
November 8, 2018 ~ 4:00 – 8:00
University of Michigan North Campus Research Complex: 2800 Plymouth Rd, Ann Arbor MI 48109

4:00 pm  Registration & Refreshments with Sponsors

4:25 pm  Welcoming remarks  Danielle Lack, MS
GLC-AAPM President

4:30 pm  Invited Speaker  Rojano Kashani, PhD
Assistant Professor – Radiation Oncology, University of Michigan

5:15 pm  Gold Sponsor Presentations

5:30 pm  Refreshment Break - Visit Sponsors

5:50 pm  Invited Speaker  Joann Prisciandaro, PhD
Associate Professor – Radiation Oncology, University of Michigan

6:35 pm  Invited Speaker  Anthony Doemer, MS
Senior Staff Physicist, Henry Ford Health System

7:20 pm  Dinner - Visit Sponsors

8:00 pm  Final remarks  Stephen Gardner, MS
GLC-AAPM President-Elect

Thanks to our sponsors for helping us continue to provide GLC events!

Gold Sponsors

Elekta  mim software  SUN Nuclear Corporation

Silver Sponsors

Accuray  macromedics  ModusRA

Bronze Sponsors

Varian  Philips Healthcare  ViewRay

Visibly Different
We believe that a better future for the treatment of cancer and neurological disease is about achieving more focus where it matters.
Dose Calculation for Adaptive Assessment

- Fast volumetric dose calculation
- Advanced Monte Carlo algorithm
  - Provided by experts with decades of experience
  - Powered by SciMoCa™
- Institution-specific beam models
- Fully automated from calculation to report generation with MIM Assistant™
- QA data archived alongside the patient’s RTplan and other imaging data in the MIMpacs RT™
- Support for Elekta®, CyberKnife®, TomoTherapy® and most Varian Medical Systems®

Visit our table to learn more about MIM SureCalc MonteCarlo.

Call 866.421.2536 or email info@mimsoftware.com to schedule a demo.

Solutions Spotlight

NEW! SunCHECK™ Plan-Checking
Automated plan checking through script-driven software launched from Varian Eclipse™

Varian Halcyon™ System Support
NEW SNC Dosimetry™ v3.6 and 3D SCANNER™ for beam model verification and Halcyon Package for acceptance and verification

NEW! MultiPHAN™
An easy-to-use tool for comprehensive TG-142 daily alignment checks – verifying lasers to EPIDs to CBCT systems

Stereotactic Solutions
NEW SRS MapCHECK™ and StereoPHAN™ for end-to-end testing and Reference Detector for interference-free dosimetry scanning

MR-Based Radiotherapy
Custom patient and machine QA solutions, including ArcCHECK®-MR, IC PROFILER™-MR, MICRO+™ MR, and Solid Water® HE

MRI-safe 4D Motion QA for Adaptive MRgRT and Simulation

MRI\textsuperscript{4D} Motion Phantom

The QUASAR™ MRI\textsuperscript{4D} Motion Phantom is capable of moving inserts in the S/I direction as well as producing a more complex 3D motion profile by twisting the insert during translation in the A/P and R/L directions. Interchangeable inserts are available for imaging, planning, targeting and delivery QA.

A Lighter, Larger and More Efficient Way to Quantify MRI Geometric Distortion in 3D!

At 21 kg, the QUASAR™ MRID\textsuperscript{3D} Geometric Distortion Analysis System is half the weight of a water-filled grid phantom of the same volume (39.4 cm x 39.1 cm).

It includes recessed handles, integrated 3 point contact feet and engraved landmarks for convenient OSHA compliant one person set-up.

Fiducials are pre-filled with susceptibility matched mineral oil to prevent plastics from swelling and allow for fast high contrast 3D T1W scanning.

The system includes robust software to automatically identify the location of the isocenter and control points in the acquired MR images of the phantom and uses a fully automated process to compare them against the truth to calculate the geometric distortion.

The QUASAR™ GRID\textsuperscript{3D} Image Distortion Analysis System is designed to evaluate image distortion in 3D MR images for stereotactic radiosurgery (SRS).

The system is comprised of a phantom and analysis software which work together to produce a 3D map of spatial distortion with submillimeter accuracy throughout a volume of interest. The GRID\textsuperscript{3D} System ensures that MR imaging can support the outstanding geometric precision and dosimetric accuracy of the Leksell Gamma Knife\textsuperscript{®}, including PERFEXION™.

The phantom is an acrylic cube containing a 1 cm 3D grid of channels filled with copper sulfate solution. The region of interest measures 14 x 13 x 11 cm\textsuperscript{3} in which there are 2002 vertex locations. The vertex locations are known to within 0.1 mm.

Accuracy. Confidence.\textsuperscript{™}
Pinnacle Evolution introduces Personalized Planning
Delivering state-of-the-art, personalized IMRT and VMAT treatment planning

Personalized planning provides:

**Quality** of treatment planning process with personalized, patient specific goals integrated from the start

**Consistency** of results from local clinic to main campus, from novice to the expert with advanced automated planning tools

**Efficiency** of planning workflow to achieve clinically deliverable, personalized therapy

**Pinnacle Evolution** introduces Personalized Planning

- **Advanced**, protocol based, therapy planning workflow
- Next-generation **automated optimization** algorithms and
- **Complete** integration with PlanIQ Feasibility from Sun Nuclear

---

1. Not available in all markets. Please check with your local Philips sales representative for more information
2. Optimization times may vary depending planning needs. Compared to Pinnacle 16.2

---

**Key advantages**

**Achieve patient-specific plan quality**

- **Improve** plan quality by using feasible optimization goals
- **Create** patient specific, personalized, therapy plans
- **Reduce** the time needed to create a plan by reducing trial and error

---

Unleash your ability to deliver high-precision SRS treatments...

HyperArc™ high-definition radiotherapy technology is designed to simplify even the most complex non-coplanar SRS treatments. Experience leading-edge features that allow you to treat multiple metastases simultaneously, enhancing your ability to treat more patients, reduce treatment times, increase throughput and maximize efficiency.
