# RECENTLY APPROVED GE FFDM DBT TESTING PROCEDURES.

S. GURU PRASAD, PH.D., DABR, EMERITUS, MATHEW HALL M.S.

NORTHSHORE UNIVERSITY HEALTH SYSTEM AND NORTHWESTERN UNIVERSITY

2650 RIDGE AVE EVANSTON IL 60201

# History of mammography

- \* During early 70's a balloon the size of basket ball was attached to a long cone.
- \* The balloon was used as a compression mechanism
- \* Conventional X-ray machine was used
- \* Ready pack films were used like the one used for therapy localization

# History

- \* The next improvement was the use of zerogram.
- \* An exposed charged plate was run through a processor.
- \* The processor sprinkled a blue powder.
- \* The iamges were printed in a large format.
- \* Shades of blue.

# History

- \* Introduction of film screen mammography
- \* Used films which were designed for mammohraphy was used
- \* High contrast
- \* Single emulsion screen of the casttes
- \* Many manufactures were approved for selling their mammo machines by FDA

#### **ACR**

- \* ACR got involved in developing a set of standards for the equipment
- \* Dose reduction and image quality was their priority
- \* Institution participation was voluntary
- \* Institutions meeting ACR standards were issued a sticker for display.
- \* Feather in the cap of institutions
- \* Participation was not 100%

#### **MQSA**

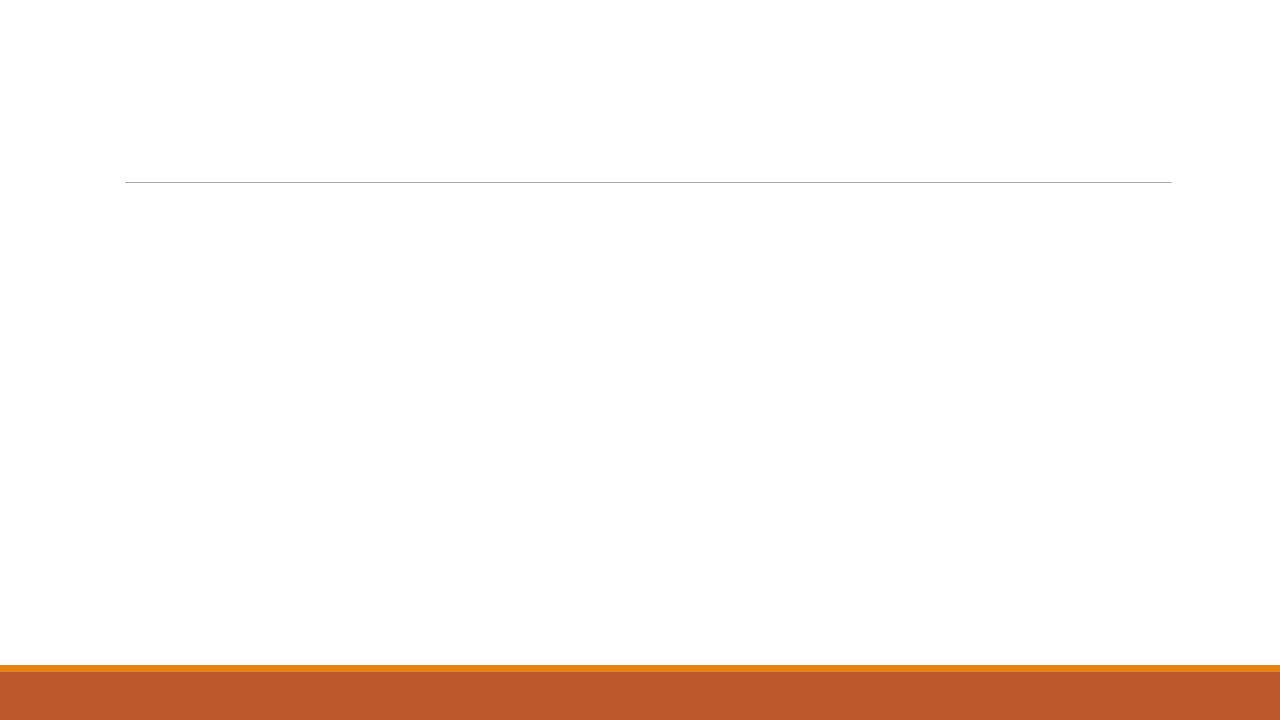

- \* Betty Ford was diagnosed with breast cancer and went public.
- \* Congress got involved in regulating standards early 90's
- \* Mandated that all screening facilities must be approved by MQSA
- \* Standards were published in 10 CFR part 21
- \* Standards were analogous to ACR guide lines.
- \* ACR manual was used as a bible by MQSA
- \* Sites were inspected annually for compliance

# INTRODUCTION OF DIGITAL MAMMOGARPHY

- Digital mammography was introduced in 18x24 format.
- Hard copy of the images were printed for interpretation
- Radiologists were ramping up with their familiarity of the digital systems
- Viewing monitors were not of adequate quality for complete on screen interpretation
- Limitation and bad width of PACS system.

# Proliferation of digital units

- \* Many manufactures got into this business
- \* GE, Siemens and Selenia were major players. There were also many others besides them
- \* Viewing monitors of adequate resolution were available.
- \* Full Field Digital Mammography FFDM was gaining grounds.
- \* Presently most of them are FFDM units
- \* Film Screen units have become extinct

#### **FFDM**

- \* Great advantage of FFDM was ones ability to adjust window and level.
- \* Viewing rooms with low light intensity were specially designed.
- \* Gained universal acceptance.
- \* Still lacked the ability to differentiate overlying objects.
- \* Testing was very prescriptive by the manufacturer. There was no single set of instrucuoions
- \* Navy under the leadership of Capt Thomas was exploring tomographic concept.

#### GE FFDM and DBT

- \* GE DBT has extensive testing to be performed before initially using on patients.
- \* Not all screening procedures are approved on all units
- \* Requires FFDM testing be performed as stand alone system
- \* DBT 2D testing to be performed.
- \* 3 D testing has to be performed.
- \* Three times the work

# Physicist Qualifications

- \* ABR certified in diagnostic radiology physics
- \* Had initial 8 hours of training in specific modality
- \* Acquire 15 hours of CEU every there years
- \* Have at least 3 units every year under the belt.

# DBT IN UPRIGHT POSITION

#### DBT IN ANGULAR STARTING POSITION

STARTING POSITION OF GANTRY

# DBT PADDLES

**BLUE IS FOR 3D OPERATION** 

# MTD

MOTORIZED TOMO DEVICE

#### TRANSPORT CADDY FOR MTD

## FDA/MQSA MANDATED TESTS FOR FFDM

- 1. MAMMO UNIT ASSEMBLY EVALUATION
- 2. COLLIMATION
- 3. SYSTEM RESOLUTION
- 4. ARTIFACTS
- 5. AEC ASSESSMENT
- ACR PHANTOM ASSESSMENT
- SNR AND CNR EVALUATION
- 8. OUTPUT MEASUREMENT
- 9. MEAN GLANDULAR DOSE MGD
- 10. FLAT FIELD TEST
- 11. KVP ACCURACY, REPRODUCIBILTY AND OUTPUT
- 12. HVL ASSESSMENT
- 13. SYSTEM RESOLUTION AND MTF

#### GE SIMPLIFIED APPRAOCH

- MOST OF THE QC TESTS ARE AUTOMATED
- QAP ICON ON THE MAIN SCREEN
- KVP AND HVL ASSESSES LIKE FILM SCREEN BUT WITH THE DETECTOR ADEQUATELY PROTECTED WITH LEAD
- IMAGE QUALITY OF THE PHANTOM ASSESSED ON BOTH ACQUISTION AND REVIEW WORK STATIONS
- ARTIFACT ASSESSED ON HARD COPY DEVICE IN ADDITION TO MONITORS.
- AOP ASSESSED FOR 2.5, 5 AND 6 cm BREAST EQUIVALENT PHANTOM

#### DBT TESTS UNDER 2D MODE

QAP ICON BRINGS ONE TO THIS SCREEN.2D AND 3D CAN BE SELECTED HERE

### TESTS WITH MTD 2D

THE TESTS INDIACTED IN THE PREVIOUS SLIDE IS REPATED WITH MTD MOUNTED.

KVP AND HVL NEED NOT BE REPEATED

#### 3D TESTS UNDER TOMO MODE

THE FOLLOWING TESTS ARE PERFORMED WITH MTD ON UNDER TOMO MODE.

TOMO IS ACTIVATED BY SELECTED 3D OPTION.

GANTRY HAS TO BE POSITIONED IN THE START POSITION

3D OPTION HAS TO CHOSEN AND DISPLATED ON MTD.

FOOT PEDAL HAS TO ENGAGED

DURING THE ENTIRE 3D

EXPOSURE

#### 3D TESTS

- FLAT FIELD TES
- PHANTOM IQ TEST
- CNT AND MTF
- ARTIFACT EVALUATION AND FLAT FIELD UNIFORMITY
- SUB SYSTEM MTF AND FOCAL SPOT
- MGD AND AEC REPRODICIBILTY
- KVP ACCURACY AND REPRODUCIBILITY
- HVL
- UNIT ASSEMBLY
- GRID TEXTUTE
- COMPRESSION PADDLE BORDER TO CW ALIGNMENT
- VOLUME COVERAGE
- ACR IMAGE ASSESSMENT

# 3D TESTS UNDER TOMO MODE CONTINUED

- ALL THESE TESTS ARE PERFORMED UNDER TOMO MODE EXCEPT
  - KVP
  - HVL
  - ARTIFACT EVALUATION
  - SYSTEM RESOLUTION

#### **VOLUME TEST**

- IMAGES ARE RECONSTRUCTED AT 1 mm INTERVAL.
- IT ICAN BE DISPLAYED AT 1 mm INTERVAL OR
- IT CAN BE DISPLATED AT 5 mm SLABS
- IT IS IMPOTRANT TO ENSURE THAT THE LOCATION OF RECONSTRUCTED PLANE ACORRESPNDS TO ACTUAL LOCATION.
- IT IS TESTED FOR 2.5 AND 6 cm THICK NESS.
- 1 mm Al FILTERS ARE PLACED AT THE BOTTOM AND THE TOP OF THE PHANTOM.
- RECONSTRUCTED IMAGE MUST DISPALT SHARP IMAGES OF THE FILTERS BOTH AT THE SURFACE AND TOP OF THE PHAN TOM.

# TIME REQUIRED TO PERFORM THESE TESTS AND FREQUENCY

- IT TAKES A TOTAL OF TWO FULL DAYS OF PAIN TAKING MEASUREMENT
- IT TAKES AN ADDITIONAL DAY TO ANALYZE THE MEASURED DATA
- GE HAS PROVIDED A TEMPLATE FOR DATA SUBMISSION.
- I HAVE DEVELPOED AN EXCELL SPREAD SHEET FOR DATA ANALYSIS AND PRODUCTION OF REPORT.
- FREQUENCY OF EACH OF THESE TESTS ARE SPECIFIED BY GE
